ANTI-FRICTION LOAD PLATE UPGRADE KIT

For PSI model 2100, 2150, 2200 and 2300 Palletizers.

Overview:

Convert from existing load plates to thin load plates with the PSI's exclusive anti-friction surface treatment .

Advantages:

- Designed specifically for hard to place bags such as plastic bags filled with a warm product or bags filled with a sticky product.
- This upgrade is also effective with thin bags, which cannot be completely filled or bags which tend to roll when being pushed.
- Helps eliminate bunching of the bag layer as it is being pushed into position on the load plates.
- In some situations it eliminates the need for air table style load plates.
- Enhances pallet appearance.
- Promotes a flatter finished pallet.

Features:

- Two new load plates
- Eight new load plate support bearings.
- A transition plate with the anti-friction surface treatment is also available. A treated transition plate will assist transferring the bag layer to the load plates without bunching the bag layer.

***Installation by our field service technicians is highly recommended.**

Selling Price Standard Model \$9,861.12**

*Installation costs should be based on one ten hour day with one PSI provided Field Service Technician and one customer supplied technician, however actual time may vary depending on circumstances. Refer to the current PSI Rate Sheet to calculate hourly rate cost, travel cost, daily expenses, etc. Customer should be aware that requests for services not related to kit installation or plant-related delays will be billed at standard service rates. Call now for more information!

**Price or specifications may change without notice. Please consult with your PSI Service Representative for the most current information.
