# LAYER PUSHER EXTENSION KIT

For PSI model 2200 and 2300 Palletizers.

**Overview:** Extend the linear stroke of the Layer Pusher to allow the bags making up a partial layer push cycle to be moved fully across the Load Plates to a position at the Back Plate.

**Advantages:**

- Promotes a more stable, better proportioned and better looking finished pallet load
- Helps to eliminate the possibility of bags being rolled up on edge when contacted by the next group of bags being moved by the Layer Pusher

**Included in Upgrade Package:**

- Extension weldments for lengthening the Layer Pusher frame
- New linear shafts or rails to accommodate the additional push distance
- Longer chains or belts (dependent on the current system configuration)

**\*Installation by our field service technicians is highly recommended.**

Selling Price Standard Model - \$5,200.00 with linear shafts, \$2,460.00 with guide rails \*\*

Selling Price if purchased with HTD Belt Upgrade and Rail Bearing Upgrade \$450.00 \*\*

\*Installation costs should be based on two twelve hour days with one PSI provided Field Service Technician and one customer supplied technician, however actual time may vary depending on circumstances. Refer to the current PSI Rate Sheet to calculate hourly rate cost, travel cost, daily expenses, etc. Customer should be aware that requests for services not related to kit installation or plant-related delays will be billed at standard service rates. Call now for more information!

\*\*Price or specifications may change without notice. Please consult with your PSI Service Representative for the most current information.
